

DIGIPASS for Mobile Enterprise Security Edition

Generate one-time passwords without additional hardware devices

DIGIPASS® for Mobile Enterprise Security Edition is the easiest way to deploy strong authentication on portable devices within your company. No additional hardware is needed. There is no SMS gateway to set up and no download server to maintain: VASCO® offers a secure provisioning service that will handle the distribution and logistics, so you can concentrate on your core business.

EASY TO DEPLOY: OFF-LINE PROVISIONING SERVICE

Strong authentication has never been easier to deploy than with VASCO's off-line provisioning service.

STEP 1:

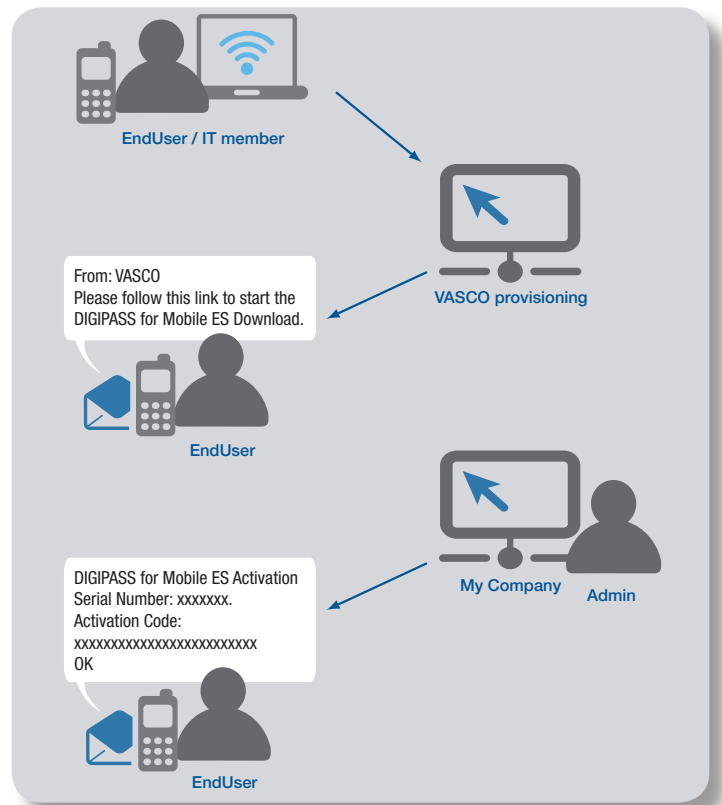

The end-user connects to the VASCO DIGIPASS for Mobile server and enters his mobile phone number.

STEP 2:

The end-user receives an SMS message containing a link to download DIGIPASS for Mobile Enterprise Security Edition and is asked to proceed with the download.

STEP 3:

Once the DIGIPASS for Mobile application has been downloaded to his device, the end-user simply has to enter the activation information provided by the IT department.

CONVENIENCE

DIGIPASS for Mobile Enterprise Security Edition provides two-factor authentication for enterprises and SMBs to secure the access to their SSL VPNs, extranets and online applications. This solution brings one-time password technology to a new level, allowing end-users to use their mobile phones as their authentication devices.

HIGH END USER ACCEPTANCE

End-users will be free to do business securely from a mobile device or a laptop while travelling anywhere in the world. They don't need to carry additional devices, and no end-user training is necessary. An embedded daylight saving adjustment feature allows frequent travelers to use their DIGIPASS for Mobile without any restrictions.

SECURITY AT ANY TIME

To address the security risks posed by online access, DIGIPASS for Mobile Enterprise Security Edition supports time-based algorithms in addition to event-based algorithms. No longer are the users' credentials at risk between logins: with time-based authentication credentials which automatically expire after a configurable time-out, or immediately after their initial use.

COMPATIBILITY

Hundreds of handsets from different mobile phone manufacturers have been formally tested, including J2ME compliant devices, BlackBerry®, iPhone® and iPod® devices. DIGIPASS for Mobile Enterprise Security Edition is also compatible with all VASCO technologies (VACMAN® Controller, IDENTIKEY® Server and aXsGUARD®).

SPECIFICATIONS

Authentication Mode	Response Only, Time Based
PIN Settings	Enabled, change enabled, default length 4 - DELETE
Weak PIN support	Enabled - DELETE
OTP Length	6
OTP Format	DECIMAL
Language	English
